Made from a mixture of synthetic and starch based plastics, our bags meet the European standard EN 13432 which is the strictest standard for compostable plastics, and equivalent to ASTM 6400. The compostable bags are also printed with soy based ink.

Currently, all compostable trash bags in the market are made from a mixture of synthetic and starch based plastics. The synthetic content usually ranges from 55% to 100%. The synthetic polymer content is necessary to give the bag its elasticity, stretch-ability and strength. Please note that composting is required for biodegradation. These bags will biodegrade within 90 days in a commercial composting facility and 180 days in a home composting system.
